

Aether - Positioning Brief

Same category headline. Different job. Do not compete as another AI closet. Own the morning ritual that ends the decision - with the full look on your body.

North-star line

Aether is the morning you stop choosing. Say where you are going. We dress the full look on your body - from what you already own, and what you buy without photographing a pile on the bed.

Pillar	Meaning
On body	Core proof - the look is dressed onto your photo
One look	Not a feed of 40 outfits
Zero upload	Moat when purchase sync ships

Taglines (pick one primary)

Line	Use
Dress without deciding (PRIMARY)	Brand, landing, App Store subtitle, Today header
See yourself already dressed	Ads / try-on demos (before -> after on your photo)
Where are you going?	Product ritual prompt - not a brand-name replacement
Your stylist. Your body. One look.	Membership / high-stakes occasions

Anti-positioning vs Essembl

Say the left column out loud in every pitch. Never lead with the right.

We are	We are not	Why it matters
A morning dress ritual	A digital closet to manage	Essembl wins organization; we win certainty
Full look on your photo	Outfit tiles / flat recommendations	Proof beats advice - try-on is our core, their roadmap
One suggestion for today	A feed of endless AI outfits	Premium = less choice, higher confidence
Voice: speak the day / swap a piece	Upload / browse / critique homework	Decision eradication, not wardrobe labor
Wardrobe fills from how you shop	Photograph every garment on the bed	Defensible moat - only if sync is real
High-stakes days done for you	Viral AI fashion toy	Different buyer, different price, different brand

Their job (Essembl)

- Organize what you own
- Suggest combinations
- Help you shop / Shopping Buddy
- Center of gravity: digital closet + advisor

Our job (Aether)

- Ask where you are going

- Pick one weather-aware look
- Dress it on your body end-to-end
- Center of gravity: occasion -> on-body proof

Feature kill-list

Kill or demote anything that makes us look like Essembl with nicer chrome.

Kill or demote	Why	Do instead
Closet-first home / wardrobe dashboard	Trains users to manage, not decide less	Today = only home: occasion -> dress
Endless outfit feed / "40 looks for you"	Commoditizes us vs Essembl	One primary look + tap/voice swap
Manual bed-scan as the main path	Their strength; our pain point	Seed + change photo + commerce sync
Outfit critique / score my fit	Advisor framing = their category	Show the dressed photo; let them swap
3D Tripo/Meshy avatar theater	Distracts from photoreal try-on that works	fal full-look on real photo only
Shopping Buddy clone	Head-on with their newest feature	Later: gaps from real outfits, not chat shop
Purple AI / viral meme brand	Undercuts premium	Calm ceremonial brand: Dress without deciding
Fake commerce "Connected" badges	Burns trust when sync is simulated	Ship one real ingest or label Demo clearly

15-second demo - ship this first

Wedge test: If a stranger cannot feel the difference from Essembl in 15 seconds, the build is wrong - not the marketing.

Demo script (exact)

- Open Today - "Where are you going?" Tap "meeting the in-laws" (or speak it).
- Watch the full look dress onto YOUR photo: top + trousers + shoes + glasses + watch - head to toe, no waist-up zoom.
- Say or tap "change the shoes." Piece swaps on the same body. Done.

Ship order (next 2-4 weeks)

Priority	Ship	Must-pass test
P0	Reliable full-body try-on (clothes + shoes visible)	Feet in frame; loafers/boots readable on body
P0	Today ritual only - occasion chips + voice	No wardrobe tab required for first success
P0	Change photo + re-dress without identity swap	Still you at the end; framing preserved
P1	Voice swap for one category (shoes / top)	Works without typing in 15s demo
P1	Honest commerce: one real path OR "Demo sync"	Never fake "Connected to Amazon"
P2	Membership: high-stakes days / unlimited dress	Pay for certainty, not "AI credits" cosplay
Later	True purchase ingest (1 retailer deep)	New buy appears in wardrobe without photo

Premium competitive posture

Win on

- Certainty for high-stakes mornings
- On-body proof, not outfit advice
- Ceremony + taste (old-money calm)
- Less UI, one job, voice-native

Concede

- Viral reach / content machine
- Closet digitization depth (for now)
- Shopping Buddy / browse-to-buy chat
- Mass "AI stylist for everyone" volume

Pricing posture

Do not race Essembl's cheap unlimited AI. Price as a personal dress ritual for people who hate deciding - weekly or monthly for unlimited on-body looks and voice restyle. Free tier: one dressed look / day so the wedge is felt before paywall.

One-sentence strategy

Essembl proved people want AI help with clothes. Aether wins by making help feel finished - the look is already on you - then locking that with a wardrobe that fills itself from shopping, not from homework.
